Formline®

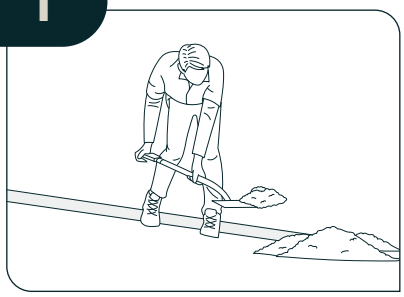
Installation Guide

For 75mm, 100mm & 150mm Edging

Useful tools for installing garden edging

- Spade
- Mattock
- Trenching shovel
- Rake
- Spirit Level
- Builders Line
- Drill
- Rubber Mallet
- Angle Grinder

STEP 1 Site Preparation



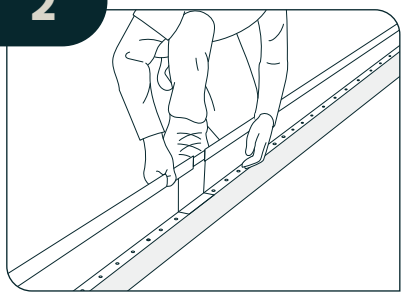
Begin by marking out the desired line for your edging using a suitable survey marking product.

Use a spade and or mattock to cut away any lawn or clear any vegetation along this line.

Using a trenching shovel excavate a trench wide and deep enough to accommodate the edging, ensuring it will finish level with your desired height once installed. Remove any lawn, rocks or roots that will impede the installation of the edging.

Tip
It's better to dig the trench slightly deeper than required. Adjustments to the finished level of the edging can be made during installation.

STEP 2 Lay the edging

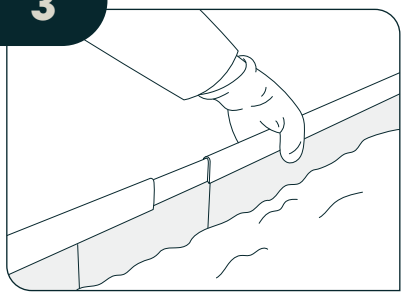


Place 2-3 lengths of your garden edging into the trench at a time.

Adjust the edging as needed to create smooth curves or straight edges, depending on your design.

Take your time to align the edging properly for a clean finish.

STEP 3 Joining



Where two pieces of edging meet, use joiners to connect the section securely.

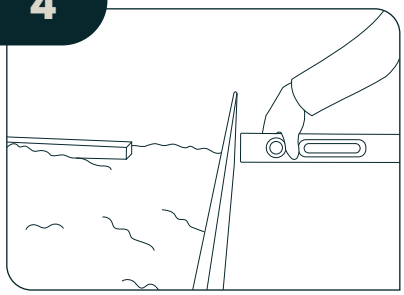
Each edging length is supplied with a joiner piece pre-attached.

This will slide easily into the end of the following length and can be secured using two Tek screws in the pre-drilled holes on the foot.

This step is crucial for maintaining continuity and preventing unsightly gaps.

STEP 4

Leveling



For straight sections use a builder's line set at the finished height of the edging.

Check the top of the edging to ensure it is level and consistent along the entire length.

Use a spirit level for curved sections.

Make any final adjustments as needed for a polished, professional finish.

STEP 5

Backfilling

Once the edging is secure, use a rake or shovel to backfill the trench with the soil or material you initially removed.

Pack the soil firmly around the base of the edging to provide additional stability.
